

Magnetic ET Flexi protective screen for door frames

ET Flexi protective screen is a simple and effective way of optical and hygienic division of space to protect individuals or groups from a direct contact with the environment.

The screen effectively blocks e.g. airborne disease particles entering the personal space of individuals protected by it. The screen is suitable e.g. for shops, market stalls, industrial and food facilities, offices, etc.

- ▶ Effective protection of personal space from direct contact with airborne diseases
- ▶ Quick and easy installation into door frames
- ▶ Installation possible also on non-magnetic surfaces by a component made from stainless steel (optional)
- ▶ Excellent light transmittance - almost 90 %
- ▶ UV and chemically resistant material, easy to disinfect
- ▶ Variable length adjustment
- ▶ Both for indoor and outdoor applications
- ▶ Foldable – can be dismantled and saved for future use

Flexible screen for effective protection of personal space

The plastic foil installed in door frame protects people on both sides and provides space needed for the contact

Magnetic fixture of steel door frames

Magnetic anchoring of the plastic foil to door frames allows quick and easy regulation of the gap and enables e.g. exchange of documents, parcels or any other objects

Different variants of fixing to the door frame

Technical details

The magnetic ET Flexi screen for door frames consists of a washable chemically and UV resistant transparent PVC foil (see Chemical resistance certificate) fixed in the top and bottom galvanized metal slat with strong magnets for quick and easy fixing to metal door frames without any permanent installation. This method of installation also allows operative and easy change of setting of the foil's height as required to effectively protect the divided spaces and persons within them and to allow exchange of documents, money or other objects. If installing the foil into panelled door frames or onto any other non-magnetic surfaces (wood, wall) an optional stainless steel component ("magnetic strip") is available that can be easily attached to the base using adhesive tape. It sticks to any non-magnetic surface. The component can be also additionally mounted to the non-magnetic base using screws (screws are not included). After that, the screen can be installed onto this modified surface in the usual way. The standard package includes an adhesive tape with SAFE ZONE print that warns about the placement of the screen inside a door frame. The customer may choose the height at which this sticker will be applied. Upon requirement, the slats can be made from stainless steel. The magnetic door frame screens are delivered in various dimensions (see table below). Other dimensions are available upon individual request. The screens are suitable for indoor and outdoor applications. We strongly recommend regular disinfection of the screens using suitable disinfectants. Use disinfectants based on sodium hypochlorite or alcohol. The magnetic screen can be dismantled anytime and easily folded by rolling it tight and stored until future use.

MAGNETIC ET FLEXI PROTECTIVE SCREEN FOR DOOR FRAMES

Dimensions of the screen (in)

Specifications	Dimensions of the screen (in)	
	Width of screen (width of door frames) × length of foil	37,4 (35,4) × 33,5
Width of screen (width of door frames) × length of foil	37,4 (35,4) × 23,6	33,5 (31,5) × 23,6

PACKAGE CONTENTS

- plastic foil with magnets fixed to the top and bottom slat
- SAFE ZONE adhesive tape
- instructions
- safety data sheet

Optional accessories:

- 2x stainless steel component „self-adhesive magnetic strip“ for installing the screen on non-magnetic surfaces
