

# Facade drainage slot

**For effective drainage of fluids from vertical surfaces**

Modular system intended for effective drainage of fluids from vertical surfaces. It is used to drain the polluted water, chemicals, and other sorts of liquids with possibility to capture the fluids in ordinary retention bunds. To prevent leakages of such fluids into the environment, or sewer system and other spaces.

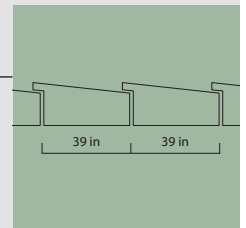

- ▶ Split-second readiness
- ▶ Easy application without damaging of masonry

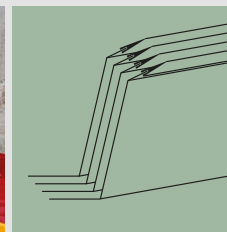

The metal body of the modular element is equipped with special rubber foam profile that seals the fixed joint of the drainage slot and the wall. Fluid removal is ensured by the highly resistant cover made of plastic coated fabric.

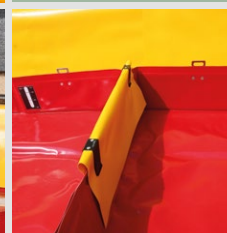

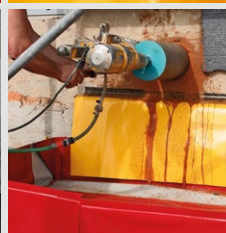

One-meter-long elements may be fitted together into a drain of an unlimited length

To capture various sorts of liquids we suggest using retention bunds ET or CARGO

Stacking elements

As a supplement to prevent the fluid leakages in the joints of the retention bunds, a coupling element is included

Specifications

Dimensions	16 × 18 × 43 in
Modular element length	43 in
Pack size of 1–10 modular elements	pallet 47 × 31 × 24 in
Modular weight	24 lb
