

# Collapsible containment tank

The self-supporting containment tank is designed to be used as a utility water reservoir or a collection tank for hazardous substances. The tank is suitable for pumping liquids from accidental spillages or as a backup water reservoir at difficult to reach areas.

- ▶ Rapid assembly
- ▶ Light weight
- ▶ Variants Octagon and Hexagon
- ▶ Side handles for easy manipulation
- ▶ Perimeter belt for better strengthening of sides
- ▶ Possibility of adding of drain hole and ball valve
- ▶ Volumes of 264–793 gallons

**Backup water reservoir at  
difficult to reach areas**

The tank can be packaged to surprisingly small dimensions

Installation of perimeter belt

The whole tank can be erected by a single person in minutes

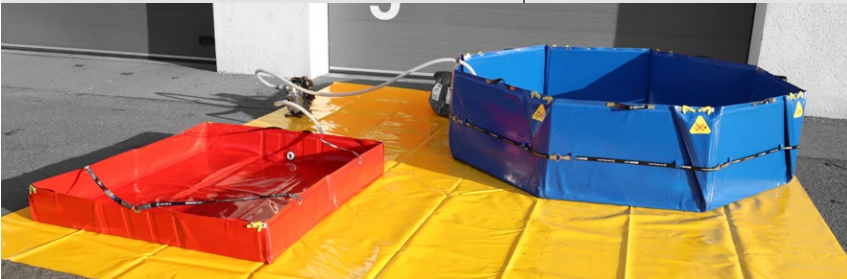

After erecting the hexagonal tarp is fixed with special fastening hooks

Possibility of adding of drain hole and ball valve

Octagon compared with ET bund XL Decon

Manipulation with Hexagon

Manipulation with Octagon

Filling the Octagon

## Technical details

The tanks are made of highly resistant PES/PVC coated material with textile reinforcement. The material is resistant against chemical and oil substances (see Chemical resistance certificate in the relevant chapter at the end of catalogue), thereby providing enhanced potential of use in environmental accidents. The sidewalls have 0,24 in thick polypropylene reinforcements welded inside. The temperature range of use is from -22 °F to +158 °F.

It is necessary for the tank to be placed on an even surface, without any sharp object. It is recommended to place the tank on a protective pad to increase its lifetime.

The product is protected by registered utility model (technical patent) no. 22118 lodged with the Industrial Property Office.

Specifications

Type	ET HX 1000	ET HX 2000	ET OCT 3000
Volume (gal)	264	528	793
